Wildlife Services:
Rabies Research in Northern New Hampshire

As part of the ongoing rabies vaccination project, biologists will be live trapping rabies vector species along State and Town roads in Coos and Grafton counties September 17th - September 23rd, and again October 5th - 9th of 2026.

Cage traps targeting raccoons and skunks will be set, and checked daily.

Captured animals will be hand vaccinated against rabies, biological samples collected, and then released unharmed with a unique ID. This effort aids Wildlife Services in monitoring the success of oral rabies vaccines, and aid in the effort to stop the spread of rabies in wildlife.

Your participation and support of this program is critical to its success.

Thank you for your cooperation.
